

## SOMAH Data Set Read Me

The SOMAH Data Set incorporates all incentive applications from the Solar on Multifamily Affordable Housing (SOMAH) program within PG&E, SCE, SDG&E, PacifiCorp, and Liberty utility service territories. The SOMAH Working Data Set includes data associated with each waitlisted, pending, installed, or cancelled project. Reported data includes, but is not limited to, application data, contractor information, incentive amounts, and Solar PV system and storage specifications.

*Figure 1 SOMAH Working Data Set*

### Program Background

The Solar on Multifamily Affordable Housing (SOMAH) program is overseen by the California Public Utilities Commission (CPUC or Commission) and provides financial incentives -for installing photovoltaic (PV) energy systems and integrated PV and energy storage to qualifying affordable housing within the service territories (collectively, the Investor-Owned Utilities, or IOUs) of Pacific Gas & Electric Company (PG&E), Southern California Edison Company (SCE), San Diego Gas & Electric (SDG&E), Liberties Utilities Company (Liberty), and PacifiCorp. It is jointly administered by the Association for Energy Affordability, Center for Sustainable Energy, and GRID Alternatives, in collaboration with California Housing Partnership Corporation and the Rising Sun Center for Opportunity (formerly, the Rising Sun Energy Center) . Funded through greenhouse gas allowance auction proceeds, SOMAH has a program budget of up to \$100 million annually and an overall target to install 300 megawatts of generating capacity by 2032.

*Legislative and Regulatory Background:* Assembly Bill (AB) 693 (Eggman), Stats 2015, Chapter 582 created the Multifamily Affordable Housing Solar Roofs Program, funded at up to \$100 million annually from the investor-owned utilities' share of greenhouse gas (GHG) auction proceeds. Senate Bill (SB) 92, adopted with the 2017-2018 State Budget, further clarified the budget for the program. Decision 17-12-022 (December 14, 2017) implemented AB 693 and changed the name of the program to the Solar on Multifamily Affordable Housing (SOMAH)

program to distinguish it from other state clean energy and low-income solar programs. Decision 17-12-022 established the program's budget, incentive structure and eligibility policies, among other items.

Figure 2 SOMAH Program Rollout Timeline

Program modifications were made in Senate Bill (SB) 355 (Eggman), October 7, 2023, including extending the SOMAH Program through December 31, 2032. Among the program directives in Decision (D.)24-11-006, issued November 14, 2024, projects are now eligible to claim integrated or paired storage incentives from SOMAH. For SOMAH projects claiming the storage incentive, the storage capacity will not contribute towards the 300 MW program goal.

**SOMAH Program Goals:** The SOMAH program is statutorily mandated to provide incentives for the installation and interconnection of at least 300 MW CEC-AC of solar generating capacity on qualified multifamily affordable housing statewide by December 31, 2032. All projects are required to provide direct tenant economic benefits and be primarily constructed for the benefit of tenants. The program includes specific eligibility for projects sited in disadvantaged communities, as identified by CalEPA and the CalEnviroScreen. There are also program requirements around energy efficiency and workforce development, including job training and local hiring. A third-party, Commission-directed program evaluation is planned tri-annually to

assess program progress and impact. For further program information, please visit the SOMAH Handbook: <https://calsomah.org/resources/program-handbook>.

### SOMAH Data Set Updates

The format of the SOMAH Data Set may be updated periodically by the SOMAH Program Administrator. Please see below for an ongoing list of updates and the effective date of modification. Please reference the “Data Key” document for a complete list of current SOMAH Data Set fields and their definitions.

Field Added	Field Removed	Effective Date

**Disclaimer for Columns EJ-EQ:**

PV Module Manufacturer through Inverter Quantity data only list system specifications and equipment information for the first array entered into PowerClerk. If you have any questions, please reach out to [contact@calsomah.org](mailto:contact@calsomah.org).

**Relation to NEM Interconnection Data**

In addition to publishing the SOMAH Working Data Set, California DG Stats provides two comprehensive interconnection data sets for public use. The first data set, the “Interconnection Applications Data Set”, contains all interconnection *applications* whether they are in queue, complete or decommissioned. The second data set, the “Currently Interconnected Data Set”, only includes interconnected solar PV NEM *projects*. This second data set presents the current “state of the world” in terms of how many interconnected solar PV projects and how many MW are installed in a given city or ZIP code, etc. All completed SOMAH incentive applications have at least one corresponding NEM interconnection application in the “Interconnection Applications Data Set”.

*Figure 3 SOMAH Data in Relation to NEM Interconnection Data*

### **Frequency of Data Publishing**

The SOMAH Data Set is currently published weekly.
